USER STORIES

Viewing Countries by Population:

As someone using the app, I want to see a list of countries sorted by their populations, from the most populated to the least, so I can get an idea of where the most people live in the world.

Filtering Countries by Continent:

I would like to filter countries by continent and see them listed by population size, so I can understand which continents have the largest populations and how they compare.

Viewing Countries by Region:

When exploring the app, I want to pick a specific region and see the countries within it, ordered by population, so I can learn about population trends in different parts of the world.

Specifying Top N Populated Countries:

I would like to choose how many of the most populated countries I want to see, so I can focus on a specific number of countries based on their populations.

Viewing Cities by Population:

I am curious to see a list of cities ranked by population, starting with the biggest ones, so I can understand where the largest urban populations are located.

Filtering Cities by Continent:

I want to filter cities by continent and see them sorted by population, so I can explore urban population distributions across different continents.

Viewing Cities by Region:

It would be helpful to select a region and see its cities ordered by population, so I can analyze population trends within that specific area.

Specifying Top N Populated Cities:

I would like to specify how many of the most populated cities I want to view, so I can focus on a specific number of cities based on their populations.

Viewing Capital Cities by Population:

I am interested in seeing a list of capital cities ranked by population, so I can understand the distribution of political and economic centers around the world.

Filtering Capital Cities by Continent:

It would be useful to filter capital cities by continent and see them listed by population, so I can compare the sizes of capital cities across different continents.

Viewing Capital Cities by Region:

I want to choose a region and see its capital cities ordered by population so I can explore population trends within it.

Specifying Top N Populated Capital Cities:

I would like to decide how many of the most populated capital cities I want to view, so I can focus on a specific number of them based on their populations.

Viewing Population Demographics by Continent, Region, and Country:

I want to see population demographics for each continent, region, and country, including the total population, urban population, and rural population, so I can understand how populations are distributed.

Viewing Total World Population:

I would like to know the total population of the world, so I can get a sense of the overall size of the global population.

Viewing Population by Specific District and City:

If I am interested in a particular district or city, I want to be able to see its population, so I can understand population distribution at a more local level.

Viewing Language Speakers by Population:

I am curious to know how many people speak specific languages, like English, French, Spanish, Arabic, and Chinese, and what percentage of the world population they represent.

Adding New Data to the Database:

I want to be able to add new information or datasets to the app's database, so the information stays up-to-date and accurate.

Applying Security Measures/Login Credentials:

I expect the app to have security measures in place, like requiring a username and password to log in, so my personal information and the data in the app are protected.
